## Introduction to the writer

Mr. Thomas T.S. Wan (溫到祥) had been working with refrigeration industries for more than 40 years. He retired in May of 1998. He held many key positions as the following:

Chief Engineer, Industrial Refrigeration & Ice Thermal Storage,  
Far East Group, York International Corp., USA.

Chief Engineer, International Group, York International Corp., USA.

Chief Engineer, Asia-Pacific, FES, USA.

Technical Director and Chief Engineer, Asia-Pacific & Middle East,  
York International Corp., USA.

President, FES Pacific Operation Inc., USA.

Technical Director, Industrial Refrigeration Group, York International Division of  
Borg-Warner Corp., USA.

Manager of Engineered Projects Department, International Group,  
York Division of Borg-Warner Corp., USA.

Project Manager, Special Project Department, Borg-Warner International Corp., USA.

Area Manager, Far East, York Division of Borg-Warner International Corp., USA.

# ENGINEERED INDUSTRIAL REFRIGERATION SYSTEMS APPLICATION 工业制冷系统与配套应用

## Contents:

- Chapter 1 - General Preface. (P7-11)
  - Preface and General.
  - What is Engineered Refrigeration System
  - System Concept & System Approach.
  - Refrigeration Industries & Products Segment Classification.
  - Refrigeration Systems Review.
  - Various Refrigeration Descriptions.
- Chapter 2 - P-H Diagram & Refrigerant Flow Diagram. (P.12-31)
  - P-H Diagram Refrigeration Cycle Analysis.
  - Refrigerant Flow Diagram
- Chapter 3 - Components for Refrigeration Cycle Efficiency Improvement.(P.32-39)
  - Economizer and Intercooler.
  - Desuperheater.
  - Subcooler.
- Chapter 4 – Compressors Overview & Annual Power Consumption.(P.40-47)
  - Characteristics of Compressors.
  - System Annual Power Consumption.
- Chapter 5 - Reciprocating Compressors. (P.48-59)
  - Constructions.
  - Characteristics and Performance.
  - Oil System.
- Chapter 6 - Screw Compressor. (P60-85)
  - Construction.
  - Characteristics and Performance.
  - Economizing Feature.
  - Oil Cooling and Oil System.
  - Variable Vi Theory and Benefits.
- Chapter 7 - Centrifugal Compressor. (P.86-101)
  - Construction, Single Stage and Multistage.
  - Internal Float Flash Cooling Economizer.
  - Partial Load Performance.
  - Oil System.
  - API-617 & 614 Specifications.
  - Speed Increaser External Gear.

- Chapter 8 – Low Temperature Refrigeration Systems. (P.102-113)  
Compound System.  
Cascade System.
- Chapter 9 - Open Cycle Refrigeration Systems. (P.114-120)  
Ammonia Storage.  
LPG Storage.
- Chapter 10 - System Balancing. (P.121-127)
- Chapter 11 - Partial Load Performance of Refrigeration System. (P.128-139)  
Anti-Surge, Hot Gas Bypass and Liquid Injection.  
Compressor Head Variation at Variable Load but Constant ECWT.  
Compressor Partial Load at 100% Full Load with Variable ECWT.
- Chapter 12 - Heat Exchangers for Industrial Refrigeration Systems. (P.140-188)  
Condensers.  
Evaporators.  
Fouling Factor.  
Submergence Effect.
- Chapter 13 - Major Mechanical Codes for Refrigeration Application. (P.189-193)  
Pressure Vessel Code ASME.  
Code requirement for Low Temperature Application.  
TEMA Code for Shell-and-Tube Heat Exchangers.  
Mechanical Refrigeration Safety Codes.  
Refrigeration Piping Codes.
- Chapter 14 - Refrigerants and Refrigerant Selection. (P.194-203)  
Refrigerants for Industrial Refrigeration.  
Dual Refrigerants System.  
Pure Hydrocarbon and Mixed Hydrocarbons as Refrigerant.
- Chapter 15 - Refrigerant Liquid Feed Circuits. (P.203-216)  
Direct Expansion.  
Flooded.  
Liquid Recirculation.  
Thermosyphone.
- Chapter 16 - Refrigerant Flow Control Valves. (P.217-231)  
Manual Service Valves.  
Automatic Control Valves.  
Liquid Level Controllers.
- Chapter 17 - Liquid Carry Over and Gas/Liquid Disengagement. (P.232-236)  
Suction Trap.  
Liquid Separation Space.
- Chapter 18 - Refrigerant Piping System. (P.237-261)  
Single Phase Gas or Liquid Flow.  
Two-Phase Gas/Liquid Flow
- Chapter 19 - Brines and Brine Piping System. ((P.262-287)
- Chapter 20 - Oil and Lubrication. (P.288-306)  
Oil Management.  
Lubricants.  
Oil Separation.  
Oil Carry Over  
Oil Still and Oil Recovery.
- Chapter 21 - Purge and Refrigerant Transfer. (P.307-316)  
Single Drum Purge.

- Double Drum Purge.
- Transfer Unit.
- Liquid Transfer.
- Chapter 22 - Electrical Codes for Refrigeration Equipment and System. (P.317-327)
  - NEC and IEC, NEMA and IP.
  - Codes for Hazardous Location and Classification.
- Chapter 23 - Motor and Starter. (P.328-340)
  - Motor Enclosures.
  - Motor for Hazardous Location.
  - Starting Torque Requirement.
  - Starter Types – Starting Percent LRA & LRT
- Chapter 24 - Compressor and System Controls. (P.341-342)
- Chapter 25 - Case of Screw Refrigeration System Design. (P.343-361)
- Chapter 26 - Case of Structuring Refrigeration System with Multistage Centrifugal Compressor. (P.362-372)
- Chapter 27 - Air Side Evaporators for Cold Storage and Frozen Food (P.373-391)
  - Unit Coolers and Product Coolers.
  - Defrost Systems.
    - Air Defrost.
    - Water Defrost.
    - Hot Gas Defrost.
  - Spray No-Frost Cooler.
  - Hygienic No-Frost Cooler.
    - Lithium Chloride Solution.
    - Tri-Ethylene Glycol Solution.
